QUALIFIED CANDIDATES ARE INVITED TO APPLY

For detailed information, including application procedures, visit [www.math.columbia.edu/mafn](http://www.math.columbia.edu/mafn)

The curriculum consists of ten courses: six required courses and four electives. It draws on the diverse strengths of Columbia in mathematics, statistics, stochastic processes, numerical methods, and applications to finance.

The program attracts students whose academic background is in quantitative areas such as mathematics, statistics, physics, economics, computer science, or engineering. Many have previous work experience in finance.

The program may be followed either full-time or part-time. International students on F-1 or J-1 visas must register full-time. Full-time students complete the program in two or three semesters, while part-time students typically take 2-3 years.

All required courses, and many of the electives, have at least one evening section in either the Fall or the Spring semester, in order to accommodate part-time students with day jobs.

The application deadline is in mid-May. Applications should include: transcripts of previous academic records, three letters of recommendation (from professors, employers, or both), a statement of academic purpose and a one-page resume. GRE or GMAT scores are required; GRE scores are preferred. TOEFL or IELTS scores are required for international students.
