## Exam 1

Modern Algebra I, Dave Bayer, February 19, 2008

Name:

| $[1](5 \mathrm{pts})$ | $[2](5 \mathrm{pts})$ | $[3]$ (5 pts) | $[4]$ (5 pts) | $[5]$ (5 pts) | $[6]$ (5 pts) | TOTAL |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |

Please work only one problem per page, starting with the pages provided. Clearly label your answer. If a problem continues on a new page, clearly state this fact on both the old and the new pages.
[1] Complete each of the following multiplication tables, so that the resulting table is the multiplication rule for a group G. In each case, what group do you get?

|  | * | 1 | 2 | 3 | 4 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 1 | 2 | 3 | 4 |  |
|  | 2 | 2 | 1 |  |  |  |
|  | 3 | 3 |  | 1 |  |  |
|  | 4 | 4 |  |  |  |  |
|  | * | 1 | 2 | 3 | 4 |  |
|  | 1 | 1 | 2 | 3 | 4 |  |
|  | 2 | 2 | 1 |  |  |  |
|  | 3 | 3 |  |  |  |  |
|  | 4 | 4 |  | 1 |  |  |
| * | 1 | 2 | 3 | 4 | 5 | 6 |
| 1 | 1 | 2 | 3 | 4 | 5 | 6 |
| 2 | 2 | 3 | 1 | 5 |  | 4 |
| 3 | 3 | 1 | 2 | 6 |  | 5 |
| 4 | 4 | 6 | 5 |  |  | 2 |
| 5 | 5 |  |  |  |  | 3 |
| 6 | 6 | 5 | 4 | 3 | 2 |  |

[2] For each of the groups found in problem 1, let the group act on itself by right multiplication. Use these actions to find permutation representations for each group.
[3] Using the given generators, draw the Cayley graphs for each of the following groups.

1. $G=\langle\{1, \mathfrak{i},-1,-\mathfrak{i}\}, *\rangle \subset\langle\mathbb{C}, *\rangle$, using the generator $\mathfrak{i}$.
2. $G=\langle\mathbb{Z} / 6 \mathbb{Z},+\rangle$, using the generators 2 and 3 .
3. $G=S_{3}$, using the generators ( $\begin{array}{ll}1 & 2\end{array} 3$ ) and (12).
[4] Here is a multiplication table for the dihedral group $\mathrm{D}_{5}$ of order 10:

| $*$ | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| 2 | 2 | 3 | 4 | 5 | 1 | 7 | 8 | 9 | 10 | 6 |
| 3 | 3 | 4 | 5 | 1 | 2 | 8 | 9 | 10 | 6 | 7 |
| 4 | 4 | 5 | 1 | 2 | 3 | 9 | 10 | 6 | 7 | 8 |
| 5 | 5 | 1 | 2 | 3 | 4 | 10 | 6 | 7 | 8 | 9 |
| 6 | 6 | 10 | 9 | 8 | 7 | 1 | 5 | 4 | 3 | 2 |
| 7 | 7 | 6 | 10 | 9 | 8 | 2 | 1 | 5 | 4 | 3 |
| 8 | 8 | 7 | 6 | 10 | 9 | 3 | 2 | 1 | 5 | 4 |
| 9 | 9 | 8 | 7 | 6 | 10 | 4 | 3 | 2 | 1 | 5 |
| 10 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 |

1. Find six nontrivial subgroups H of $\mathrm{D}_{5}$ (not order 1 or 10 ).
2. For two of the H that you found, what are the right cosets of H in G ?
[5] Let $G$ be the group $\langle\mathbb{Z} / 3 \mathbb{Z},+\rangle$, and let $H$ be the group $\langle\mathbb{Z} / 6 \mathbb{Z},+\rangle$. How many group homomorphisms can you find from G to H ? From H to G ?
[6] The Klein four group V is the group of order 4 with elements

$$
\{1, a, b, c\}
$$

and the multiplication rules

$$
\mathrm{a} * \mathrm{a}=\mathrm{b} * \mathrm{~b}=\mathrm{c} * \mathrm{c}=1, \quad \mathrm{a} * \mathrm{~b}=\mathrm{b} * \mathrm{a}=\mathrm{c}, \quad \mathrm{~b} * \mathrm{c}=\mathrm{c} * \mathrm{~b}=\mathrm{a}, \quad \mathrm{c} * \mathrm{a}=\mathrm{a} * \mathrm{c}=\mathrm{b}
$$

The Quaternion group Q is the group of order 8 with elements

$$
\{1,-1, i,-i, j,-j, k,-k\}
$$

and the multiplication rules

$$
\mathfrak{i} * \mathfrak{i}=\mathfrak{j} * \mathfrak{j}=k * k=-1, \quad \mathfrak{i} * \mathfrak{j}=-\mathfrak{j} * \mathfrak{i}=k, \quad \mathfrak{j} * k=-k * \mathfrak{j}=\mathfrak{i}, \quad k * \mathfrak{i}=-\mathfrak{i} * k=\mathfrak{j}
$$

How many group homomorphisms can you find from V to Q ? From Q to V ?
