Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

(AG, R&S)

What I found most unsatisfactory in my mathematics textbooks was the absence of any serious attempt to tackle the meaning of the idea of the arc-length of a curve, or the area of a surface or the volume of a solid. I resolved therefore to make up for this defect once I found time to do so. In fact I devoted most of my energy to this when I became a student at the University of Montpellier, between 1945 and 1948.

Arrival in Paris (1948)

Caleb Ji

Part 4:
Hermitage
(1991–2014)

- Received a scholarship to study in Paris thanks to André Magnier
- Attended the famous Cartan seminar

(AG, R&S)

I discovered the existence of a mathematical world when I got to Paris in 1948, at the age of 20, with not much more in my thin suitcase than a bachelor's degree in science and a closely-written manuscript using both sides of the paper and without margins (paper was expensive!), representing three years of solitary reflections on what (I later learned) was known as "measure theory" or "the Lebesgue integral". Since I had never met another, I believed until the day I arrived in the capital, that I was the only person in the world to "do mathematics", the only mathematician.

The Cartans

(Décembre 1952)

PRODUITS TENSORIELS TOPOLOGIQUES ET ESPACES NUCLEAIRES

par A. GROTHENDIECK

Les espaces vectoriels topologiques envisagés sont localement convexes et séparés. Si E est un tel espace, E_s (resp. E'_s) désigne E (resp. E') muni de la topologie faible, E' désigne le dual fort de E . Si E et F sont des espaces localement convexes, $B(E, F)$ est l'espace des formes bilinéaires continues sur $E \times F$, $\mathfrak{B}(E, F)$ l'espace des formes bilinéaires séparément continues.

Soit A une partie bornée convexe cerclée de E , E_A désigne l'espace engendré par A , muni de la norme $\|x\| = \inf_{\lambda \in \Lambda} |\lambda|$. Soit V un voisinage convexe cerclé de 0 dans E , E_V désigne l'espace normé qui se déduit par passage au quotient de la semi-norme qui correspond à V .

1. Produits tensoriels topologiques.

Theorem (Riemann-Roch)

For a compact Riemann surface with canonical divisor K and genus g , for any divisor D we have

$$l(D) - l(K - D) = \deg(D) - g + 1.$$

Theorem (Grothendieck-Riemann-Roch)

Let X, Y be locally of finite type over S . Let \mathcal{F} be a finite locally free sheaf on X of rank r . Let $f : X \rightarrow Y$ be a proper smooth morphism. Then

$$ch(f_! \mathcal{F}^\bullet) td(Y) = f_*(ch(\mathcal{F}^\bullet) td(X)).$$

(AG)

"Witches Kitchen 1971. Riemann-Roch Theorem: The final cry: The diagram is commutative! To give an approximate sense to the statement about $f : X \rightarrow Y$, I had to abuse the listeners' patience for almost two hours. Black on white (in Springer lecture notes) it probably takes about 400, 500 pages. A gripping example of how our thirst for knowledge and discovery indulges itself more and more in a logical delirium far removed from life, while life itself is going to Hell in a thousand ways and is under the threat of final extermination. High time to change our course!"

1957-1958: the beginning of a new era

(AG, R&S)

“1957 was the year in which I began to develop the theme “Riemann-Roch” (Grothendieck version) - which almost overnight made me into a big “movie star”. It was also the year of my mother’s death and thereby the inception of a great break in my life story. They figure among the most intensely creative years of my entire life, not only in mathematics. I’d worked almost exclusively in mathematics for 12 years. In that year there was the sense that I’d perhaps done what there was to do in mathematics and that it was time to try something else.

THE COHOMOLOGY THEORY OF ABSTRACT ALGEBRAIC VARIETIES

By ALEXANDER GROTHENDIECK

It is less than four years since cohomological methods (i.e. methods of Homological Algebra) were introduced into Algebraic Geometry in Serre's fundamental paper^[1], and it seems already certain that they are to overflow this part of mathematics in the coming years, from the foundations up to the most advanced parts. All we can do here is to sketch briefly some of the ideas and results. None of these have been published in their final form, but most of them originated in or were suggested by Serre's paper.

(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

Definition (schemes)

Given any commutative ring A , define the affine scheme $\text{Spec } A$ to be the locally ringed space consisting of the prime ideals of A equipped with the topology of closed sets being those containing a fixed subset of A . The structure sheaf is defined by $O_{\text{Spec } A}(D(f)) = A_f$. A scheme is obtained by gluing affine schemes along open subsets.

(AG, R&S)

"The very notion of a scheme has a childlike simplicity - so simple, so humble in fact that no one before me had the audacity to take it seriously."

Schemes

Caleb Ji

Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Grothendieck also develops the functorial point of view, which (by Yoneda's lemma) characterizes a scheme X by the functor $h_X: \text{Sch}^{\text{opp}} \rightarrow \text{Set}$

$$h_X(T) = \text{Mor}(T, X).$$

- In fact, one can restrict to affine schemes, and thereby define schemes by imposing appropriate conditions on functors $F: \text{Rings} \rightarrow \text{Set}$.
- This point of view translates geometric properties into categorical ones, and is used to construct new types of geometric spaces, including algebraic stacks (used heavily in moduli theory).

Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

Let X be a projective non-singular algebraic variety defined over \mathbb{F}_q . The zeta function $\zeta(X, s)$ is defined as

$$\zeta(X, s) := \sum_{m \geq 1} \frac{N_m}{m} q^{-ms},$$

where N_m is the number of points of X defined over \mathbb{F}_{q^m} .

Theorem (Weil conjectures)

- 1 $\zeta(X, s)$ is a rational function of $T = q^{-s}$.
- 2 $\zeta(X, n - s) = \pm q^{\frac{nE}{2} - Es} \zeta(X, s)$ where E is the Euler characteristic of X .
- 3 $|\alpha_{i,j}| = q^{i/2}$ for $1 \leq i \leq 2n - 1$ and all j .
- 4 If X is a (good) "reduction (mod p)" of a non-singular projective variety Y defined over a number field embedded in the field of complex numbers, then the degree of P_i is the i th Betti number of the space of complex points of Y .

Weil conjectures

(1970–1991)

Part 4:
Hermitage
(1991–2014)

(AG, R&S)

"In contradistinction to what one finds in ordinary topology, one finds oneself in the presence of a disconcerting abundance of differing cohomological theories. One had the impression that, in a sense that should be taken rather flexibly, all of these theories "boiled down" to the same one, that they "gave the same results"."

(AG, R&S)

"This idea was developed, on the fringes of more fundamental and urgent tasks, under the name of the "theory of motives", or of "philosophy (or "yoga") of the "motives", through the years 1963-69. It's a theory of a fascinating structural richness, a large part of which remains purely conjectural."

(1991–2014)

(AG)

“ During the war her working conditions were particularly difficult, and her contact with me was restricted to an intermittent correspondence. She was able to come to France in 1974/75 [...] and earned her doctoral degree with this thesis in Paris.”

May '68

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- 1968 was a year of great left-wing, anti-war, and civil rights protests around the world
- In France, students and workers joined in a nationwide strike, reaching its peak in May '68
- Rapidly dissolved after suppression and an election
- Left a deep impression on Grothendieck; his full commitment to mathematics began to wane

1970: The great turning point

Caleb Ji

(1991–2014)

- Grothendieck discovers that a small part of IHES funding came from the military
- The final push behind Grothendieck's decision to break with the mathematical establishment, under enormous internal personal forces

Massy le 9.6.1970

Monsieur le Directeur,

Suite à ma lettre au Comité Scientifique, je vous confirme par la présente mon départ de l'IHES à partir du 1. Octobre 1970.

Veuillez agréer, Monsieur le Directeur, l'expression de ma considération distinguée

A. Grothendieck

Dear Sir, Following my letter to the Scientific Committee, I herewith confirm my departure from the IHES starting 1 October 1970. Please accept, Sir, the expression of my distinguished consideration. A. Grothendieck

Mathematical posts held post-1970 in France

Part 4:
Hermitage
(1991–2014)

Heisuke Hironaka wins the 1970 Fields medal for resolution of singularities in characteristic 0.

(AG, footnote to laudatio)

"This is all the more true since the development of algebraic geometry, and everything else as well, will come to an end if our species disappears in the coming decades – a possibility that today seems more and more likely."

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Born on July 20, 1970 from a conference in Montreal
- Environmental, ecological goals, and political goals
- Founding members include AG, Claude Chevalley, Pierre Samuel.

(Mission statement)

"Fight for the survival of the human race and for all life, which is endangered due to the ecological imbalance caused by the industrial society of today (pollution and destruction of the environment and natural resources), and by military conflicts and the threat of military conflict."

Survivre et Vivre

Caleb Ji

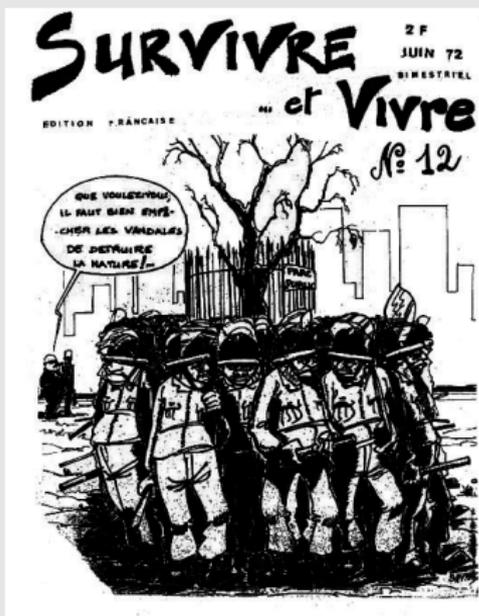

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Published a bulletin, 1970 – 1973, on themes such as ecology, scientism, the military-industrial complex, nuclear power, pollution, consumerism, etc.
- Organized conferences, meetings, public discussions

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Grothendieck tries to recruit scientists, due to both his perception of their responsibility and his status among them
- Attends mathematical conferences to give environmental talks, to recruit, and also simply to agitate
- Tours universities, schools, meets with local movements all over the place in both France and abroad
- e.g. Invited to CERN to lecture on “Shall we continue with scientific research?”

Trips to America

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- 1/1971 – 3/1971: invited professor at Queens University. Trudges through the Canadian winter barefoot in sandals, lectures on group schemes and ecology, supports nearby Native American activism
- 3/1971 – 4/1971: *Survivre* talks at 21 universities in 7 weeks, including Hamilton, Buffalo, Rochester, Stanford, Berkeley, Los Angeles, Princeton
- 5/1972 – 7/1972: Teaches at SUNY, visits Fordham, Rutgers, Brown, Albany, University of Massachusetts, Stony Brook to talk about *Survivre*
- Meets Justine Skalba at Rutgers, who follows him back to France
- Summer 1973: Lecturing up to seven hours a day in Buffalo on algebraic geometry and topos theory

Commune life

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- In late 1972, founds a commune in Châtenay-Malabry along with Justine
- Gradually withdraws from *Survivre* activities
- Commune collapses in 1973 due to complicated personal relationships and lack of funds, as Grothendieck goes to Buffalo

(AG, La Clef des Songes)

‘Although I committed myself with the utmost energy, my reflections only touched the periphery of my existence. No doubt because I dimly perceived this, I gradually withdrew during the year 1972 from anti-militaristic, ecological and “counter-cultural” activities, since I felt that we had reached a point where we were stuck in routine engagement instead of integrating ourselves into a bigger movement ... ’

Proof of the Weil conjectures: 1973

Caleb Ji

Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Moved to Villecun, a small village in France
- Justine leaves soon after with their son
- Grothendieck takes up a professorship at Montpellier

(Winfried Scharlau)

[H]e was cheerful, he brought wine, fruit, vegetables or nuts to the common meals, he sang, helped with manual jobs, was infinitely generous (in the circle of his friends he was often called “the bank”), and his house was open to everyone; he was (at least for some years) deeply convinced of the value of the alternative lifestyle that he encountered with the region’s “breakaways” and in the rural communes. Later, in hindsight, he wrote that he had experienced this period as a “Sunday”.

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- House small and dingy, but open to everyone
- Sleeps on a door taken off its hinges
- Vegetarian, lives off local farmers
- Gives away money and buys people land left and right
- Drove an old Citroën 2CV to teach at Montpellier (received license after failing his driving license nine times)

(AG, La Clef des Songes)

my "relatives" ... are neither family members nor people of education even of vast culture ... but the poor among the poor"

Professor at Montpellier

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

"I will never forget the evenings spent at Villecun, the two of us doing math by the light of the old oil lamp. [...] Grothendieck was completely different, other-worldly. Instead of translating things into another language, he thought and spoke directly in the language of modern structural mathematics, which he had contributed greatly to creating." - Yves Ladegaillerie

Teaching philosophy

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- 1 1973 – 1977: Taught undergrad courses on analytic functions, topology and the fundamental group, and group theory
- 2 1977 – 1978: Taught a course on the geometry and combinatorics of polyhedra
- 3 ~ 1977 – 1982: Taught courses on research

(AG, letter to friend)

The mathematical thought of a child (in so far as it actually leads to a “discovery”) could be more “valuable” than a published work (inasmuch as it is mindless and joyless, a routine publication). Or rather, the one is valuable, and the other is spiritual and psychological “junk”. ... Polyhedra (take just the cube or even the icosahedron) are an equally inexhaustible source of mathematical reflection and insight on every “level”.

Introduction to research

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Tries to stimulate his students toward creativity, with varied success
- Gives a detailed account of this in *La Clef des Songes*

(AG, En Guise de Programme)

When an intense curiosity animates research, we advance as if carried on impatient wings. Are we not then like a venturesome bark, which avidly plows the immeasurable ocean? Yes, we are surrounded on all sides by billowing mists, ceaselessly taking shape, illuminated by our searching gaze, ceaselessly dissolving in order to challenge us all the more to penetrate them!

[...]

It lies with us whether we will be the child absorbed in a fascinating game – or hopping marionettes...

Encounter with Buddhism: 1974

(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

Theorem (Belyi)

A complex algebraic curve can be defined over $\overline{\mathbb{Q}}$ if and only if it can be written as a covering over \mathbb{P}^1 ramified over at most three points.

- A dessin d'enfant is simply a graph with vertices colored alternately black and white, on a surface.
- A dessin gives a subgroup of F_2 , and thus an algebraic curve over \mathbb{P}^1 ramified over at most three points.
- By Belyi's theorem, these are identified with algebraic curves defined over $\overline{\mathbb{Q}}$. This implies there is a $\text{Gal}(\overline{\mathbb{Q}}/\mathbb{Q})$ action on these dessins!
- This action can be identified with the mysterious faithful outer action of $\text{Gal}(\overline{\mathbb{Q}}/\mathbb{Q})$ on \widehat{F}_2 , by Grothendieck's theory of étale π_1 .
- Bottom line: $\text{Gal}(\overline{\mathbb{Q}}/\mathbb{Q})$ itself is embedded in how dessins transform!

Anabelian geometry

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Motivated by dessins d'enfants, AG outlined anabelian geometry with a letter to Faltings
- Anabelian question: How much information about the isomorphism class of the variety X is contained in the knowledge of the étale fundamental group?
- Conjecture (proven by Mochizuki): $\pi_1^{\text{ét}}(C)$ determines C where C is an appropriate hyperbolic curve.

Figure: Gerd Faltings

Figure: Shinichi Mochizuki

Récoltes et Semailles

Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Written 1983-1986, a personal account of AG's life as a mathematician
- Harshly critiques many other mathematicians, particularly Deligne, for a loss of morals
- Claims his work was buried and his vision torn apart

(AG, R&S)

"Yet it is not these gifts, nor the most determined ambition combined with irresistible will-power, that enables one to surmount the "invisible yet formidable boundaries" that encircle our universe. Only innocence can surmount them, which mere knowledge doesn't even take into account, in those moments when we find ourselves able to listen to things, totally and intensely absorbed in child play."

Transition out of math

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- At the end of R&S, indicates his plan to return to the topoi, arithmetic geometry, and motives of his SGA days
- Cut short by a deep conviction that such an investment into mathematics was not right for him anymore

(AG, La Clef des Songes)

I knew very well that “I” had the power to end this mathematical frenzy, and even that it was urgent to end it and to meditate. And for as I rejected this increasingly urgent need, I decided to ignore it, to continue to let go of the reins of the pleasure and the vertigo of this “mathematical high”. I understood that the mechanism to which I left control over my person, on my soul, was no different than that of the drunk, or the morphine addict.

La Clef des Songes

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

In contrast to the mutants, he remembers Rudi Bendt, a simple man who was even greater simply by his love.

(AG, La Clef des Songes)

Since I happen to meditate on my life and on myself, the action in my life of the love he gave me in my childhood, without even knowing it nor surely want it, underground action, elusive, invisible to all except to God alone, is only beginning to become apparent to me. And when I measure my actions and my failures (and even my successes ...) in terms of who he was, I feel my smallness – not by a commendable effort of modesty, but by the evidence of truth.

Religious and spiritual psychosis

Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Begins hearing voices, hallucinating angels and demons
- Identifies with Marthe Robin, a legendary Catholic Franciscan nun
- Believes in the coming of a New Age, which he announces to many of his acquaintances (though he retracts it)
- In 1990, undertakes an epic 45-day fast. Saved by his friends and children

Les Dérivateurs (1990 – 1991)

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Returns to mathematics for a “badly needed” vacation
- Writes ~ 2000 pages of serious math research in under a year
- Returns to the derived categories of the SGA days, to build the foundations better using homotopical algebra
- Starting point is fixing the non-functoriality of the cone construction of derived categories
- Anticipates the infinity categories of today, while also providing its own independent perspective and results

Leaving

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Unexpectedly disappears in 1991 after burning all his papers, except some math he leaves with Jean Malgoire (professor at Montpellier)

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

■ Extreme isolation in Lasserre

Plants

Cared greatly about plants, growing some using alcohol

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

The problem of evil

Caleb Ji

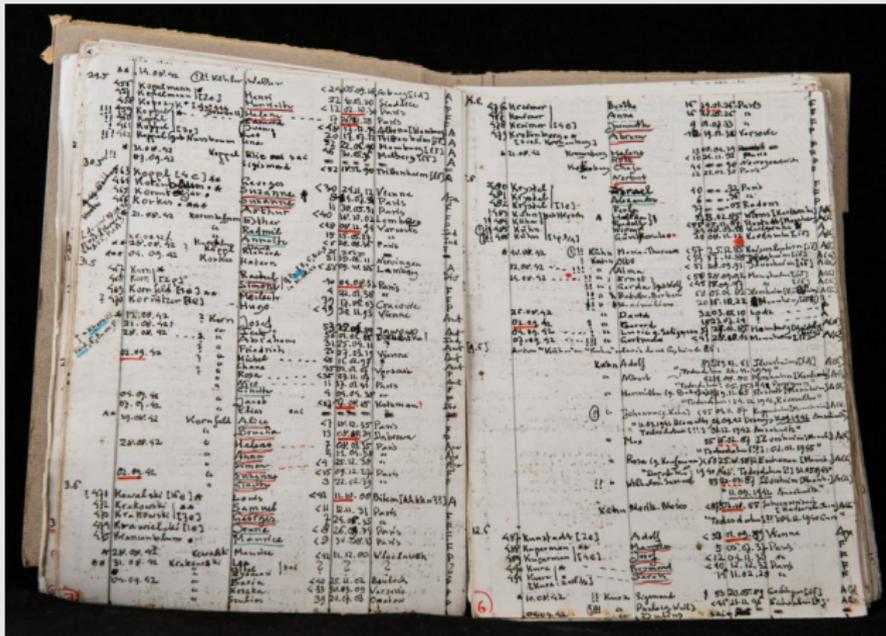

Haunted by the Holocaust, the weight of history of the 20th century, and other manifestations of evil he believed he saw

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

Visited by grad students

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

"Hesitantly, I asked him if he would allow me to take a photograph with him. I said I wanted to keep it as a memento. In his gentle manner, he told me to come closer. He shook my hands and hugged me and said that this hug was a better memento." - Mohammad Hadi Hedayatzadeh

Visited by grad students

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

"[...] when he came back out of his house he presented me with a tomato and a packet of almond paste. The tomato was large and fresh and came from his garden – impressive for January – and he told me to eat it in good health." - Katrina Honigs

Death

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Reunited with his children shortly before his death
- Died in a nearby hospital on November 13, 2014
- Approximately 30,000 pages of writings left behind from Lasserre on math, physics, the psyche, and the problem of evil

Lasserre writings

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Elementary Schematic Geometry
- The Structure of the Psyche
- Spirit and Creation
- The Problem of Evil
- Reflections on Creation

Acknowledgments

Caleb Ji

Part 1:
Upbringing
(1928–1949)

Part 2:
Mathematics
(1949–1970)

Part 3:
Freedom
(1970–1991)

Part 4:
Hermitage
(1991–2014)

- Biographies by Winfried Scharlau and Leila Schneps, available on grothendieckcircle.org
- Notices of the AMS articles, particularly *Comme Appelé du Néant* by Allyn Jackson
- Centre for Grothendieckian Studies, <https://csg.igrothendieck.org/>, by Mateo Carmona

Some successors
